

CH6 V2

interconnection cable

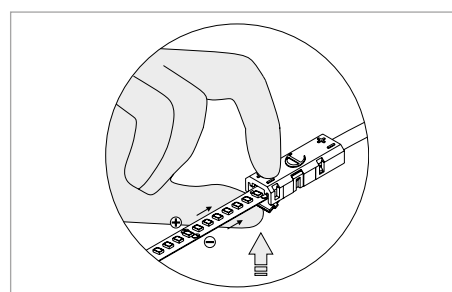

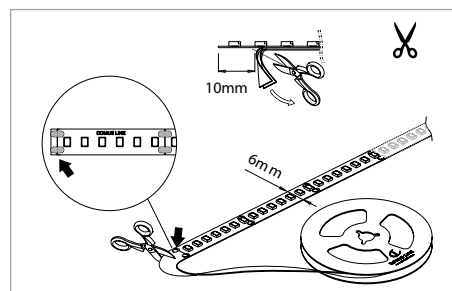

Code	Connector	Length
F0001000021	2x CH6 V2	60mm
F0001000022	2x CH6 V2	100mm
F0001000023	2x CH6 V2	2000mm

The CH6 V2 connection system is used to wire linear light sources with 6mm circuit widths. No soldering needed.

Particularly suitable for FLEXYLED linear light sources, both single-colour and dual-colour D-Motion, the connector is provided with “pressure” contacts guaranteeing the electrical and mechanical connection of the light source. The CH6 V2 is ideal for making DIY linear luminaires, such as NEXUS.

The CH6 V2 connector is supplied pre-wired with a 2000mm Plug&Play power cable and a Micro24 male connector. The collection also includes interconnecting cables, a back-to-back connector and an corner connector for making “continuous row” lighting systems.

It is recommended not to bend the light sources during handling and assembly as this could impair operation. Refer to the assembly instructions supplied with the product for more details.
